

FORD PX2 RANGER 2015-

NOTES:

- Ensure that both left and right hand Fender Flares suit the profile of the vehicle. Note the areas where the Fender Flares come in contact with the vehicle.
- Before fitting Fender Flares remove any mouldings, strips or existing flares from the wheel arch. If there is a body side moulding, mark where the moulding is to be cut, alternatively the Fender Flares can be cut to go around the moulding. Be sure to allow enough room for the extrusion.
- Read instructions carefully. This product must be installed exactly as specified in these instructions. Failure to do so may result in improper fit and/or retention.

<u>EGR</u>

FENDER FLARES INSTALLATION INSTRUCTIONS

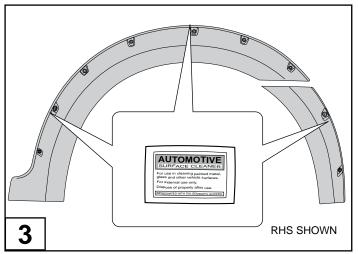

FF831

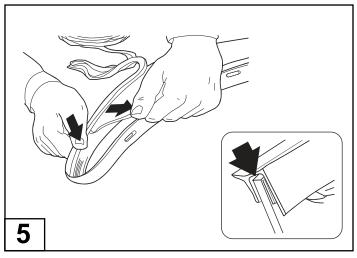

Wash the areas of contact on the vehicle and wipe dry. Wipe the fender where the flare will contact, using provided Alcohol wipes.

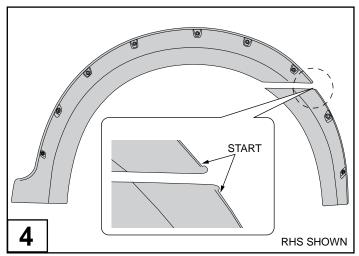

Remove the mud flaps by removing the (7) scrivets from inside the wheel arch as shown.

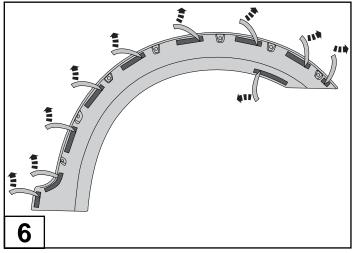

Clean the inside edge of each fender flare where the rubber extrusion will adhere. Use the provided alcohol wipes.

Pulling at right angles to the extrusion, remove the liner from the extrusion in small portions and apply thumb pressure to ensure that it adheres to the Fender Flares. Trim any unnecessary extrusion and discard.

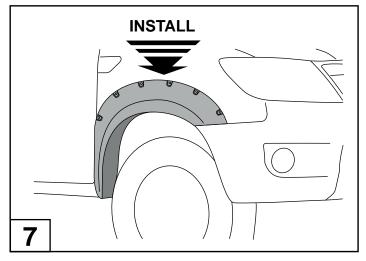

Remove approximately 50mm of the protective liner from the extrusion. Fit the extrusion to the Fender Flare along the edge that comes in contact with the vehicle's body panel. **NOTE:** Start applying the extrusion from area shown above.

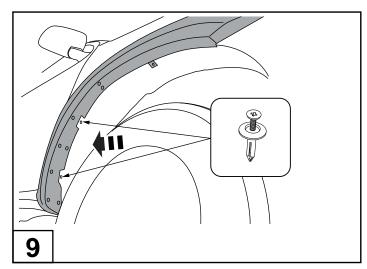

On the inside of the fender flare remove approximately 25mm of the protective liner from the double sided tape locations. Fold the liner over and secure with masking tape to the outside of the bumper flare.

<u>EGR</u>

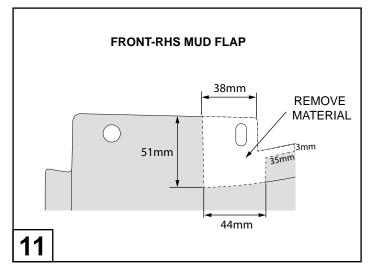

FENDER FLARES INSTALLATION INSTRUCTIONS

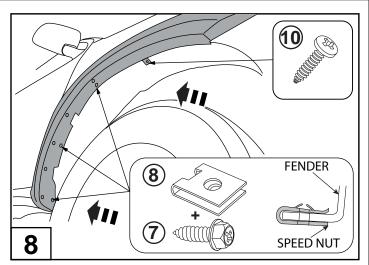

Fit the fender flare to the vehicle in the uppermost vertical position, before final fixings and tape application is completed as shown.

Reattach the wheel arch liner with two factory scrivets.

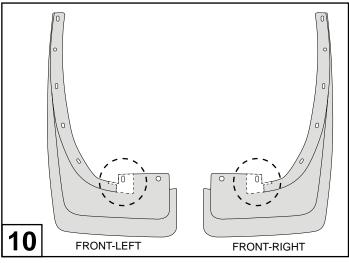

Measure and mark Mud Flap area to be removed, as shown. Using tin snips remove the white area. Repeat for the LHS Mud Flap. Remove all the masking tape.

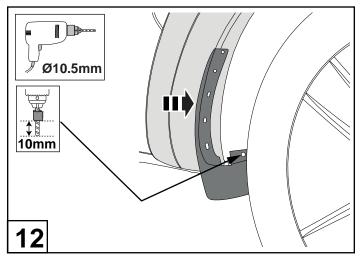

FF831

Hold the splash guard inwards and push the supplied (3x)8.5 Speed Nuts onto the front guard into the 3 hole positions as shown. Fold the plastic Tab inwards over the fender and secure with one Phillips head screw.

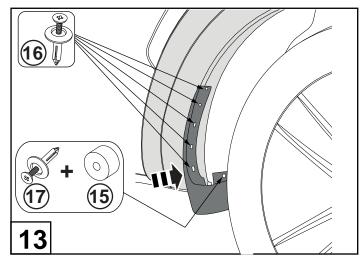

Prepare the Front Mud Flaps by cleaning them & covering the marked areas with masking tape.

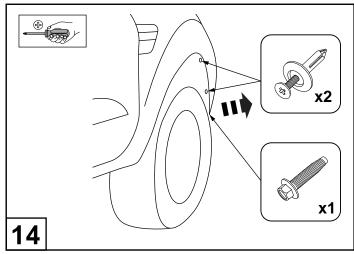

Fit the Mud Flap to the Fender Flare aligning with all the holes. Mark and drill a 10.5mm hole in the liner for the bottom scrivet as shown.

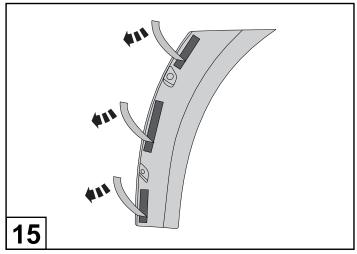

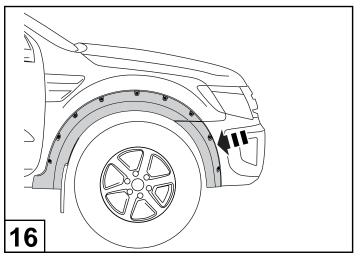

Fit the Mud Flaps to the Fender Flare and secure with (5) 6mm Plastic Scrivets. Secure the bottom part of the mud flap with one 10mm Plastic Scrivet and place the 5mm spacer behind the Mud Flap.

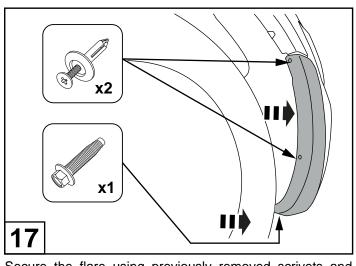

Remove and retain (2) scrivets from the wheel arch on the front bumper. Remove and retain the Hex head screw located under the bumper.

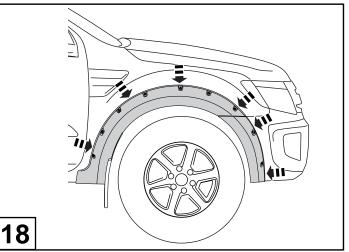

On the inside of the bumper flare remove approximately 25mm of the protective liner from the double sided tape locations. Fold the liner over and secure with masking tape to the outside of the fender flare.

Fit the bumper flare to the vehicle as shown.

Secure the flare using previously removed scrivets and screw as shown.

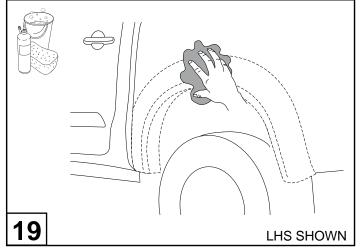

Ensure that flares are aligned. Remove the tape liner. Apply firm pressure on the flare to ensure the tape is contacting the vehicle surface around the full perimeter of the flares.

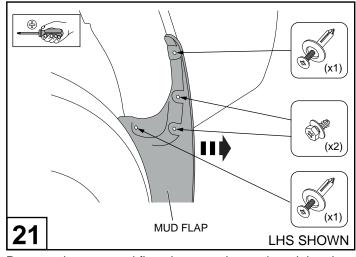

FF831

FOR THE LHS FRONT FENDER FLARE INSTALLATION REPEAT STEPS 1 TO 18

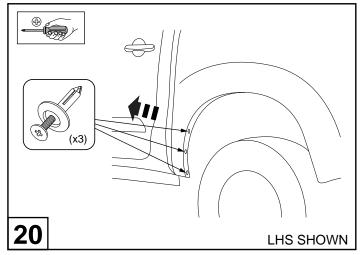

CONTINUE WITH STEP 19 FOR THE REAR LHS FENDER FLARE INSTALLATION

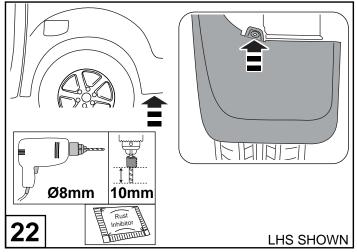

Wash the areas of contact on the vehicle and wipe dry. Wipe the fender where the flare will contact, using provided Alcohol wipes.

Remove the rear mud flaps by removing and retaining the (2) screws and (2) scrivets from inside the wheel arch as shown.

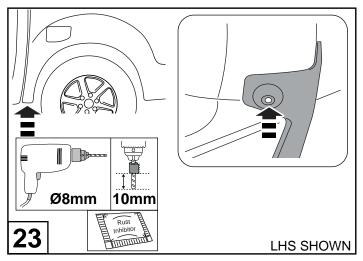

Remove the (3) scrivets from inside the rear wheel arch as shown.

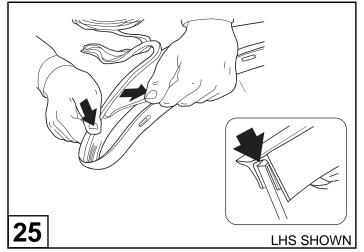

Carefully drill through centre of rivet holding the liner behind the rear mud flap, with a Ø8mm drill bit & and 10mm drill stop as shown. Carefully remove the reminder of the rivet using needle nose pliers. Apply rust inhibitor to the holes.

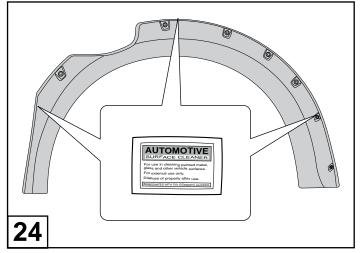

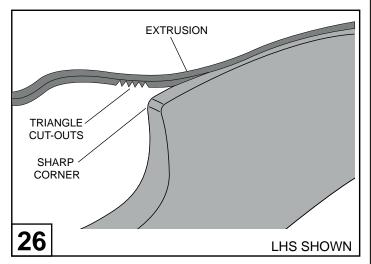

Carefully drill through centre of rivet holding the liner with a Ø8mm drill bit & and 10mm drill stop as shown. Carefully remove the reminder of the rivet using needle nose pliers. Apply rust inhibitor to the holes.

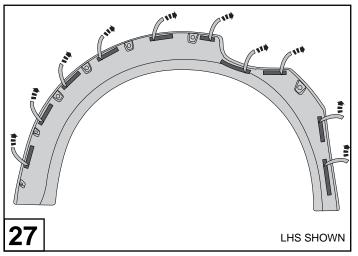

Pulling at right angles to the extrusion, remove the liner from the extrusion in small portions and apply thumb pressure to ensure that it adheres to the Fender Flares. Trim any unnecessary extrusion and discard.

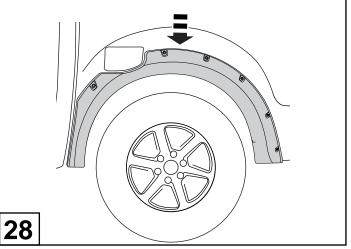

Clean the inside edge of each fender flare where the rubber extrusion will adhere.

The extrusion has multiple triangles out of the extrusion where it meets the sharp corners as shown.

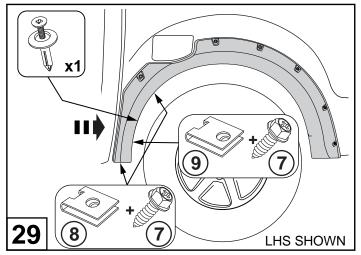

On the inside of the fender flare remove approximately 25mm of the protective liner from the double sided tape locations. Fold the liner over and secure with masking tape to the outside of the bumper flare.

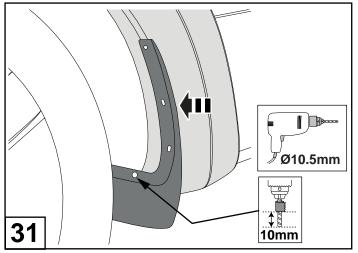

Fit the fender flare to the vehicle in the uppermost vertical position, before final fixings and tape application is completed as shown.

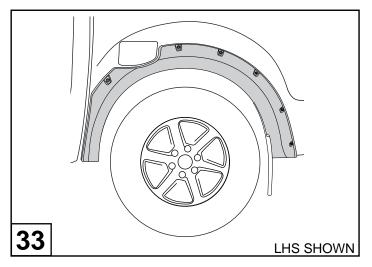

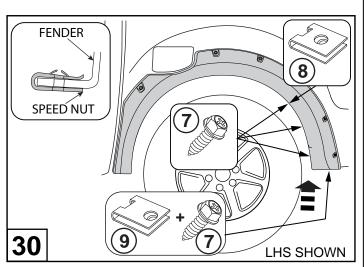

Attach the front part of the rear fender flare with (3) Hex head screws and Speed nuts as per front fender process. Reuse one factory plastic scrivet as shown.

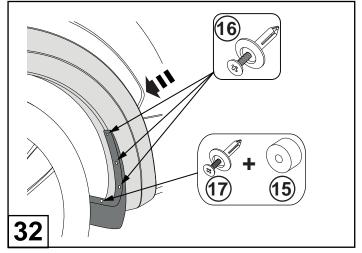

Fit the Mud Flap to the Fender Flare aligning with all the holes. Mark and drill a 10.5mm hole in the liner for the bottom scrivet as shown.

Ensure that flares are aligned. Remove the tape liner. Apply firm pressure on the flare to ensure the tape is contacting the vehicle surface around the full perimeter of the flares.

Attach the rear part of the rear fender flare with (3) Hex head screws and factory plastic nuts. Secure the rear lower part with one hex head screw and Speed nuts as shown.

Fit the Mud Flap to the Fender Flare and secure with (3) 6mm plastic scrivets and one 10mm scrivet at the bottom, with one 5mm spacer.
